矛盾

```
$num=$_GET['num'];
if(!is_numeric($num))
{
  echo $num;
if($num==1)
  echo 'flag{**********}';
}
```

查找is\_numeric函数

# PHP is\_numeric() 函数

is\_numeric() 函数用于检测变量是否为数字或数字字符串。

PHP 版本要求: PHP 4, PHP 5, PHP 7

## 语法

```
bool is_numeric ( mixed $var )
```

### 参数说明:

● \$var:要检测的变量。

### 返回值

如果指定的变量是数字和数字字符串则返回 TRUE,否则返回 FALSE。

https://blog.csdn.net/Yyyyywly

通过百度发现

```
"123, , , 1.22, , , 3"

"123e+9"

"123d-8"
以上返回的都是True

第1、2条很正常,
第三条有西文的",",可以理解: 外国人习惯把数字隔3个加个逗号。
第四条中文的", "也可以,可要注意:
cint("12,,3")可以得到123
cint("12, , 3")就出错了

第四第五条,里面有"e","d","+","-",应该不是数字,但是这里是科学计数法。所以当是数字。
```

#### 基础知识

#### 表达式

关键字、运算符、变量、字符串常数、数字或对象的组合。表达式可用来执行运算、操作字符或测试数据。

#### 参数

传递给一个过程的常数、变量或表达式。

可以构造一个算数表达式,结果等于1就可以。

或者用科学计数法表示1也可以。

看别的wirteup发现php判断字符串以1开头即可判断等值,所以还可以构造1XX。(XX是随便什么(因为PHP是弱类型语言

```
$num=$_GET['num'];//GET方式获取参数
if(!is_numeric($num))//is_numeric() 函数是判断是否为数字或者数字字符串
{
echo $num;
if($num==1)//矛盾既要是1又要不是数字
echo 'flag{********}';
}
```

```

:8002
/get/index1.php?num=1
+0

Enable Post data
```

```
echo $num;

if($num==1)

echo 'flag{**********}';

}
